

## Lesson Outline

- Mobile IP (version 4)
  - Terminology
  - Agent Discovery
  - Registration
  - Routing and Tunneling
  - Home Network Configurations
  - Proxy and Gratuitous ARP
- Mobile IP version 6
  - slides by Charles Perkins (May 31, 2001)

Charles Perkins : IEEE Comm. Mag 35, 5 (May 1997)

Petrozavodsk, September 9, 2004 Kimmo Raatikainen 2

## Basic Problem in IPv4

- IPv4 address identifies a node
- IPv4 address is used to find a route to the node
- name and address are the same
- convenient (but change of address!)
- DHCP solves some problems (but DNS!)

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

3

## Terminology - 1

- Mobile node
- Home agent
  - a router on a mobile node's home network
- Foreign agent
  - a router on a mobile node's visited network
- Agent advertisement
  - a message send by FA
- Care-of-address
  - termination point of a tunnel towards MN
  - foreign agent care-of-address
  - collocated care-of-address (IP address assigned to MN in a visited network)
- Correspondent node

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

4

## Terminology - 2

- Foreign network
- Home address
- Home network
- Link
- Link-layer address
- Mobility agent
  - home or foreign agent
- Mobility binding

- Mobility security association
  - collection of security contexts between a pair of nodes
  - authentication algorithm and mode
  - secret
  - style of replay protection in use

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

5

## Terminology - 3

- Node
- Nonce
- Security parameters index (SPI)
  - identifies security context among those available in mobility security association
- Tunnel

- Virtual Network
  - a network with no physical instantiation beyond its router
- Visited network
- Visitor list
  - list of MNs visiting a foreign agent

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

6

## Protocol Overview

- Agent Discovery
- Registration
- Tunneling

Home Agent

Global Internet

Mobile Node

Foreign Agent

IP Host

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

7

## Mobile Agent Discovery

- ICMP Router Discovery with mobility agent extension:
  - flags: special features available
  - extension type
  - sequence number
  - lifetime
  - care-of-address
    - Home agent does not advertise care-of-address

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

8

## Flags

- Registration required
- FA busy
- Agent is HA
- Agent is FA
- Minimal encapsulation (RFC 2004)
- GRE encapsulation (RFC 1701)
- Van Jacobson header compression (RFC 1144)

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

9

## Registration Message

- Requests and replies to UDP port 434
- Structure
  - IP header fields
  - UDP header
  - Mobile IP message header
  - Extensions

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

10

## Registration Request

- Type, flags, lifetime
- Home address
- Home agent
- Care-of-address
- Identification (reply protection)
- Extensions (e.g. mobile-home authentication extension)

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

11

## Registration Reply

- Lifetime
- Registration status
  - success or failure with reason
- Dynamic Home Agent Discovery
  - broadcast request
  - home agents rejects it (code 136)
  - MN detects IP addresses of HAs

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

12

## Security in Registration

- Registration messages are prone to attacks
- Nonce is inserted to identification
- Resynchronization needed
- Authentication extensions:
  - mobile-home (in all registration requests and replies)
  - mobile-foreign
  - foreign-home

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

13

## Authentication Extension

- Type
- Length
- SPI
- Authenticator

- Default authentication algorithm is keyed-MD5/prefix+suffix
  - 128-bit digest

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

14

## Routing and Tunneling

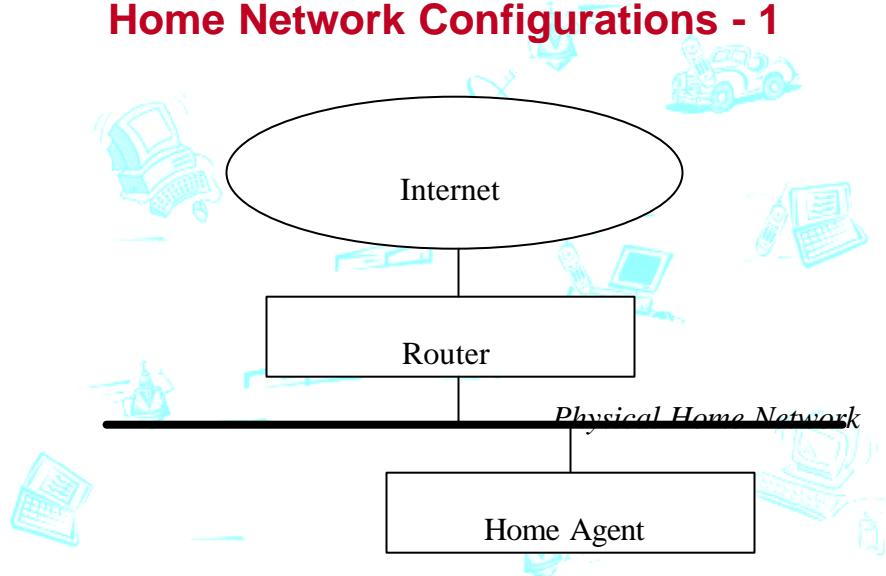

- Encapsulation
  - minimal, IP-within-IP, ...
- Soft tunnel state
  - Information in ICMP error messages insufficient
- Home Network Configurations
- Proxy and Gratuitous ARP

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

15

## Home Network Configurations - 1

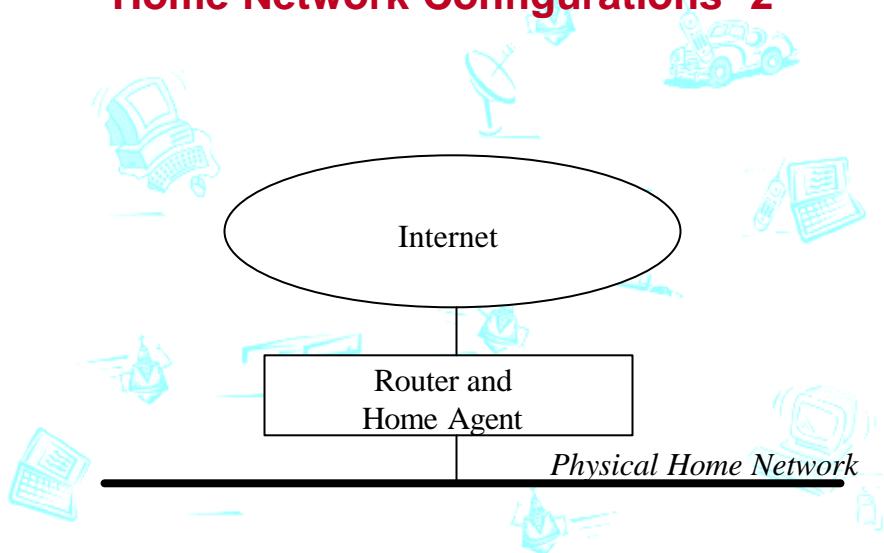

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

16

## Home Network Configurations -2

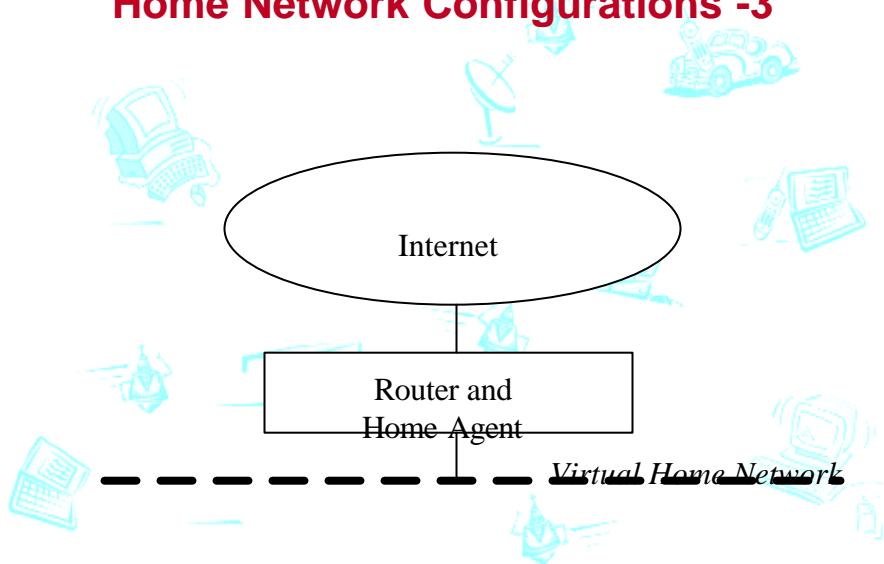

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

17

## Home Network Configurations -3

Petrozavodsk, September 9, 2004

Kimmo Raatikainen

18

## Proxy and Cratuitous ARP

- In the case of physical home network home agent has to perform proxy ARP to the MN
- When MN moves from home ARP cache entry become stale
- Therefore, HA needs to broadcast gratuitous ARP when ever MN leaves or arrives home network
- MN should never broadcast an ARP request or reply in any visited network

Petrozavodsk, September 9, 2004
