# Project outline

## Qt Messaging Framework

<http://qt.gitorious.org/qt-labs/messagingframework>

- open source project (LGPL license)
- consists of a C++ library and daemon server process
- used to build email clients, and other software that interacts with email and mail servers
- designed to be extensible to allow other types of internet and telephony messages

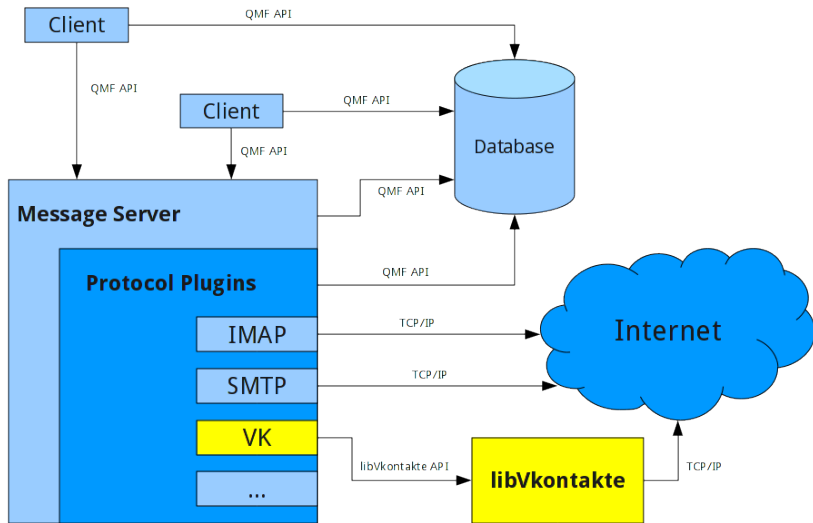

## VKontakte social network

<http://vkontakte.ru>, <http://userapi.com>

- Most popular service in Russia, Ukraine, Belarus and Kazakhstan
- VKontakte is a clone of Facebook
- Has a application programming interface (API)
- MySocials project has a libvkontakte library

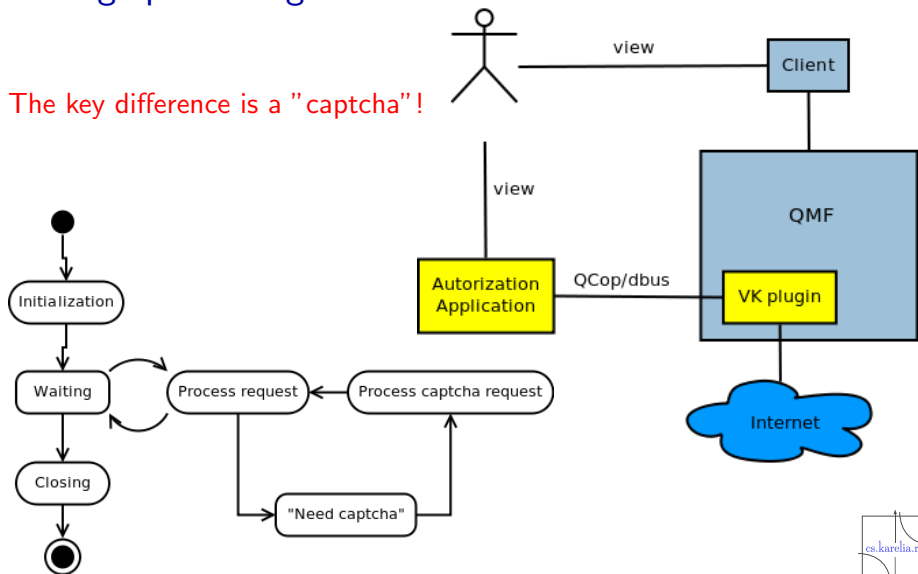

# QMF-vkontakte architecture

# Message processing

The key difference is a "captcha"!

# Conclusion
